The appropriate extension fee under 37 CFR 1.17(a) is calculated from: (1) the expiration date of the shortened statutory period for reply originally set in the final Office action; or (2) as set forth in (b) above, if checked. Any reply received by the Office later than three months after the mailing date of the final rejection, even if timely filed, may reduce any earned patent term adjustment. Continuation of 11. does NOT place the application in condition for allowance because: Applicant asserts that Gozdz '087 does not teach the lamination of electrolyte layers since no electrolyte salt is present. This argument has been considered but is not persuasive for the following reasons. First, it is noted that the reference calls the layers "separator/electrolyte elements"; therefore, according to the reference's nomenclature the layers are electrolytes. Furthermore, the PVDF/HFP copolymer of the reference is ionically conductive in its own right and thus is an "electrolyte" even without salt. Finally, it is noted that the instant specification discloses that the electrolyte layers contain salt before and during the lamination process. However, the instant claims do not recite this. If Applicant should consider filing an amendment proposing such limitation, they are advised that entry of such amendment after final rejection is not a matter of right.
